THIS CATALOG SHOWCASES OUR AMERICAN MADE GLOVE STYLES.....

Carolina Glove Company has been protecting hands since 1946. A Family-Owned and operated business, Carolina Glove is one of the largest Made in the USA manufacturers of products for work and safety. When you need American Made Quality, Reliability, and Protection; we've got the matter in hand.

We are proud to offer Made in the USA lines of gloves, sleeves, aprons, and fabrics for a broad range of applications. Our Made in USA lines are proudly showcased in the following catalog. From the coldest refrigerated areas to the hottest foundries, from cotton to leather to Kevlar®, we've got over 5,000 different variations of gloves and safety items.

State of the art technologies at our facilities include CAD/CAM cutting capabilities and EDI and RFID tracing systems. Our tradition of ingenuity and commitment to quality allow us to continually update our facilities and keep us at the forefront of the textile industry.

Carolina Glove Company employs over 175 people in our U.S. factories. We are ISO 9001:2008 certified and are capable of producing over 65,000 pairs of gloves each week. Our products are constructed from the finest Made in the USA materials and expertly crafted in our factories in North Carolina. Carolina Glove can also customize products to meet special needs and market conditions. Our ability to manufacture in the United States allows us to provide solutions in days instead of months. Carolina Glove's focus on customer service and satisfaction is the foundation of our success.

DuPont™

KEVLAR® SLEEVES

Kevlar.

Courtesy of DuPont™

Cuts and gashes cause a great deal of pain and discomfort. They also lower the morale of the workforce. To better protect workers and to save time and money, protective wear made with Kevlar® makes a real difference. Independent tests show Kevlar® can be 2.5 times more cut-resistant than leather and 60% more so than cotton. Delivering comfort, long wear life, easy maintenance and launderability while saving you the cost of injuries, Kevlar® protects workers and makes good business sense too. In addition, to its superior cut protection, protective gloves and sleeves made with Kevlar® provide outstanding high temperature resistance and low thermal conductivity. Unlike flame-retardant cotton, Kevlar® is inherently flame resistant, and won't melt, burn, or support combustion in the air. Because this protection is permanent and cannot be washed out or worn away, Kevlar® is the ideal choice for workers who need protection from cuts, abrasion, sharp objects, and sparks or heat.

HKVKS143

HKVKS203

Kevlar® Sleeve Single Ply 3" Width

"Wear with Confidence"
Buy Made in USA!

The Primary Use Of Hot Mill Gloves Are In Applications Involving Heat. Double or Triple Layers of Fabric Create A Natural Insulating Property. These Gloves Are Usually Sized Larger Than Snug Fit To Aid In Quick Removal Of Hot Objects. Hot Mills Can Be Bought Either Nap In Or Nap Out. The Outside Layer Is Composed Of Cotton To Insure The Proper Amount Of Insulation And To Protect Against Melting Of Synthetic Fibers. Olive Drab And Light Green Shows Less Dirt Than The Natural Color Hot Mill Gloves.

Clute Pattern (Straight Thumb) (ST)
Excellent fit, usually straight thumb, not a reversible pattern.

Gunn Cut Pattern Palm side of gloves' surface extends two-thirds of the way around the fingers.

Keystone Thumb (KT) Comfortable, Sewn-in-Thumb.

Reversible Pattern (Gunn Cut, Wing Thumb) (WT) Thumb at side of glove, permitting glove to be worn on either hand.

Slip-On Pattern Allows easy On/Off; has no Cuff.

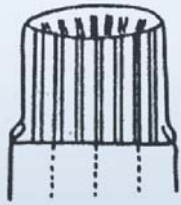

MEASURING GLOVE SIZE

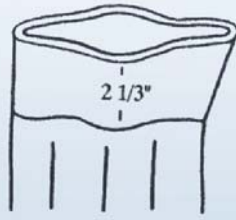

The chart below illustrates how to determine the user's glove size when selecting hand protection. It is an approximate size range. Measure the circumference of your hand in inches between your thumb and knuckle.

Size in Letters	XXS	XS	S	M	L	XL	2XL	3XL
Circumference of your hand	5"-6"	6"-7"	7"-8"	8"-9"	9"-10"	10"-11"	11"-12"	12"-13"
Synthetic (Size in numbers)	5	6	7	8	9	10	11	12
Leather (Size in numbers)	6	7	8	9	10	11	12	13

TYPES & CUTS OF LEATHER

- Cow- Cowhide Leather is the most commonly used leather within the glove industry due to its plentiful availability. Chrome tanning of this leather provides greater wear and heat resistance.
- Pig- Pigskin affords the greatest breathability due to the porous texture of this hide. Additionally, pigskin tends to become softer with use and withstands moisture without stiffening. When laundered, this leather will return more to its natural soft texture.
- Goat- Goatskin provides natural lanolin that helps to create abrasion resistance.
- Deer- Deerskin is one of the toughest leathers available due to the thorny nature of the animal's natural habitats. Deerskin leather's high tensile strength is abrasion resistant and offers high durability.

Cuts of Leather

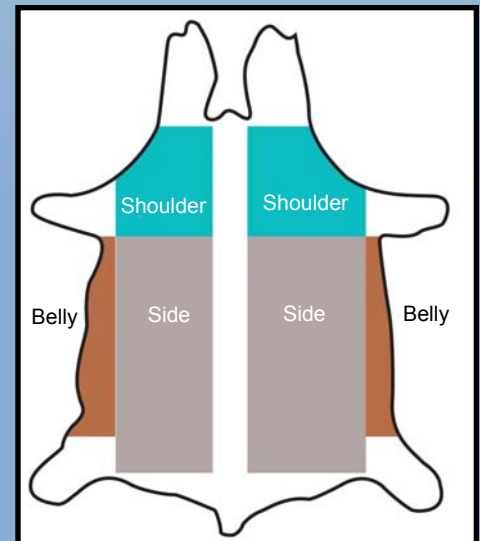

Grain- Grain Leather is the smooth external side of the hide.

Split- Split Leather is the rougher internal side of the hide. The different types will be side, shoulder, or belly split.

-Side Split- Side split is the most durable and provides the greatest density of fibers.

-Shoulder Split- Shoulder split leather is more economical, but less durable.

-Belly Split- Belly split leather is the most economical, but it has the least consistency of texture and appearance.

We offer FR Treatments, Specialty Yarns, Heat Transfers, Block Printing, Leather Pad Printing, Custom Sizing, PVC Doting in Various Colors, UPC Barcoding, Special Packaging, and More. Call us at 1-800-438-6888 for more information.
